**THESIS ABSTRACT**

The purpose of this essay is to: (1) interpret infinitism and its objections, (2) to defend infinitism from those objections, and (3) to identify a new response which does not suffer from the same problems as those objections. First, this work will interpret infinitism and Peter Klein’s Interrogation Argument. Specifically, as it is found in “Human Knowledge and the Infinite Regress of Reasons” and “Infinitism is the Solution to the Regress Problem.” Second, this work will interpret and respond to objections to the arguments found in those works. Specifically, the objections considered come from Carl Ginet’s “Infinitism is not the Solution to the Regress Problem” and Michael Bergmann’s “Is Klein an infinitist about doxastic justification?” Finally, this work will raise an objection to the Interrogation Argument and examine how this objection fits into the rest of the dialogue. Specifically, there may be meta-epistemological priors at the heart of the disagreement presented, and that there is reason to disagree.
